

**Crossbeam Systems** builds the world's highest performing security services switches for mission-critical security infrastructures. **Crossbeam Systems' security appliances run key applications such as firewall, intrusion protection, VPN, anti-virus and content scanning.** Crossbeam solutions are based on the groundbreaking patent-pending technology that makes up the core architecture.

## X-Series

- **Crossbeam X40™**

The Crossbeam X40 is the first high performance, highly available, multi-security application platform available to enterprise and service provider customers. The X40 security services switch is built on a high-speed switching fabric architecture comprised of two data switches and two control switches. This separates user/control traffic and ensures complete redundancy

- **Crossbeam X45™**

The Crossbeam X45 is designed to secure the network perimeters of mid-market enterprises. Its compact 7-slot chassis features up to 16 gigabit Ethernet ports or up to 32 Fast Ethernet ports and up to 4 gigabits per second of full duplex firewall throughput, delivering the port density and performance of an X40 in half the size. The X45 is ideally suited for protecting the perimeters of medium to large enterprises.

- **Crossbeam X80™**

The Crossbeam X80 was designed to protect the networks of large enterprises and service providers. It features the same 14-slot chassis as the X40, but delivers twice the performance and port density. The switch supports up to 32 Gigabit Ethernet ports or up to 64 Fast Ethernet ports and up to 8 gigabits per second of full duplex firewall throughput. This performance and form factor make it the ideal solution for protecting the perimeters and data centers of very large enterprises and service providers that require total redundancy.

## C-Series

- **Crossbeam C30™**

The highly acclaimed Crossbeam C30 is a turnkey security solution based on Crossbeam's flagship X-Series technology. This high performance, high port density, and high availability security services switch lets customers consolidate layers of defense in a compact, expandable form factor. The C30 is the first network processor-based turnkey platform of its kind available today.

- **Crossbeam C10™**

The C10 Security Services Switch is a high performance network security device for remote offices and small- to medium- sized businesses. Multiple best-in-class security applications on one platform, turnkey simplicity, high performance and capacity and high availability are just a few features that will allow companies to lower operational and administrative costs.
